

ENVIRONMENTAL POLICY

Exploration & Testing Associates Limited is committed to achieving and maintaining the highest standards of environmental requirements in all aspects of our work and service to our Clients. The scope of this work covers ground investigation, materials testing and report submissions across the range of geotechnical and environmental investigations.

We achieve this through the following:

- Identifying and Prioritising our environmental responsibilities and impacts through the prevention of pollution, protection of the environment, carbon footprint monitoring and waste minimisation in key aspects of our work
- Identifying, monitoring and achieving our environmental objectives
- Commitment to working to current applicable legislation together with other business and industry requirements.
- Commitment to continual improvement to enhance environmental performance.

Our Environmental philosophy is communicated to staff who are knowledgeable and well trained to understand and work within our agreed environmental standards and working practices which are outlined in the Business Management System (BMS).

The effectiveness of the BMS is monitored through internal and external auditing and regular business checks on our work and business procedures. Through this philosophy we aim to deliver to our clients the highest standards of work and to fulfil our environmental and compliance obligations.

Our Environmental policy is reviewed annually, communicated to staff and is available to all interested parties and the wider business community.
